# HCL BigFix Lifecycle

Cross-platform patching and automation, software distribution, and OS provisioning, remote control and power management

## Overview

BigFix Lifecycle helps find and fix problems in minutes across all endpoints. Discover, secure and manage hundreds of thousands of endpoints on more than 90 different OS versions within hours or minutes. In addition to ensuring that all of your systems are patched and secure, you can automate OS Migrations, query endpoints in real-time for the presence of malicious files, quickly install software, perform advanced automation or do simple remote control with just a few clicks. BigFix Query accurately identifies and inspects endpoints through a user-friendly web interface using simple, intuitive questions.

## Benefits

Manage up to 250,000 endpoints from a single server

---

Reduce management complexity and cost

Cover the full system lifecycle

---

Simplify operations and deliver comprehensive visibility

# Features

## **Manage Up To 250,000 Endpoints From A Single Server**

Manage up to 250,000 endpoints, regardless of location, connection type or operating system from a single management console. Manage heterogeneous platforms across more than 90 operating system versions. BigFix Lifecycle does all of this through an intelligent agent on each endpoint that performs continuous self-assessment and policy enforcement with minimal impact on system performance; and enables remote desktop control to streamline help desk calls and problem resolution.

## **Cover The Full System Lifecycle**

Address the full system lifecycle including asset discovery and inventory, software distribution, operating system deployment, migration and re-imaging, patch management, power management and remote desktop control. Asset discovery and inventory features create dynamic situational awareness about changing conditions in the infrastructure. Quickly discover new systems, deploy agents and take complete control with closed-loop policy-based management.

## **Reduce Management Complexity And Cost**

The BigFix solution automates patching, remote software deployments, Windows 10 migrations, OS updates and re-imaging. It can also automate more advanced tasks like operating systems and application patching on clustered servers to minimize labor costs and ensure servers are patched and secure according to your policies. It also supports other common system administration tasks that need to be sequenced, such as server builds that can include deploying an operating system or changing the host name.

## **Simplify Operations And Deliver Comprehensive Visibility**

BigFix Lifecycle accelerates patch cycles, improves patch success rates and reduces downtime while minimizing security risks all through a single pane of glass

### **About HCL Software**

HCL Software is a division of HCL Technologies (HCL) that operates its primary software business. It develops, markets, sells, and supports over 20 product families in the areas of DevSecOps, Automation, Digital Solutions, Data Management, Marketing and Commerce, and Mainframes. HCL Software has offices and labs around the world to serve thousands of customers. Its mission is to drive ultimate customer success with their IT investments through relentless innovation of its products.
