Security and
Protection**

**Unconstrained
Innovation**

**Unified Platform
for Consumer and
Enterprise Apps**

**Flexible
Scalability**

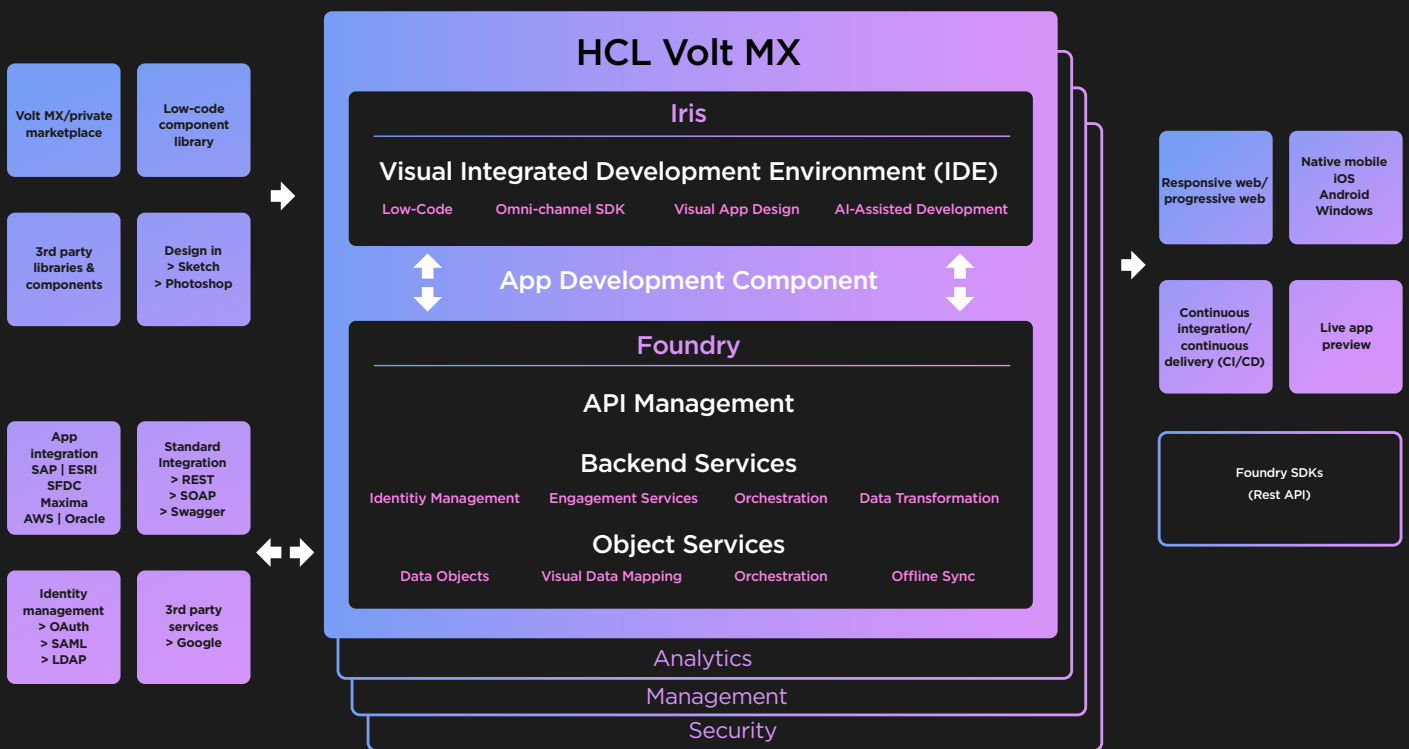

HCL Volt MX

Beautiful apps. Transformation delivered.

HCL Volt MX is one of the only platforms that combines the speed and ease of use of low-code application development across all devices with an enterprise-grade backend integration, orchestration, and application services capability that accelerates application delivery. Volt MX supports web in the form of responsive and progressive web apps (PWAs), native iOS, Android and Windows, and next-gen digital technologies like chat bots, augmented reality, artificial intelligence and more.

The Volt MX platform is made up of two major components — a low-code integrated development environment (Iris) and a backend integration, orchestration and services layer (Foundry). Together these enable rapid app development without limits or constraints on what you can do.

Proven Solutions Without Limits

From forms-based employee apps to mission-critical customer-facing apps, HCL Volt MX is a proven solution for small businesses and the world largest companies.
