

HCL OneTest API

Ensuring Complete Testing of Complex Systems

HCL OneTest API triggers and validate your system's APIs across a range of network protocols and message formats within a scripting-free test development environment.

Benefits & Value

Reduce Risk: Test complex integration points between applications before they cause problems while adapting to constantly-changing business needs.

Improve Efficiency: Shift testing left so you can test applications before UI delivery while enhancing coverage and providing faster feedback to development.

Reduce Cost: Automate at the API layer to test without needing to set up complex end-to-end environments.

Capabilities

- **Uncover dependency relationships** in your tested system by observing system traffic and extracting information held within servers.
- **Create tests** using a codeless environment with a set of rich actions to aid development, and achieve further customization using ECMA Script or Groovy.
- **Build a model** for systems under test to separate logical concerns from physical landscapes, easily switch between environments, and house all connection details in a single location.

About HCL Software

HCL Software, a division of HCL Technologies (HCL) develops, markets, sells, and supports over 30 product families in the areas of Customer Experience, Digital Solutions, DevSecOps, and Security and Automation. HCL Software is the cloud native solution factory for enterprise software and powers millions of apps at more than 20,000 organizations, including over half of the Fortune 1000 and Global 2000 companies.
