

HCL OneTest Virtualization

Virtualizing Middle-Tier and Back-End Applications and Services

HCL OneTest Virtualization enables faster development and testing by simulating missing system components so development and testing activities can continue when the real service is unavailable.

Benefits & Value

Reducing Dependencies: Allowing teams to work simultaneously while reducing internal and external dependencies.

Improving Quality: Starting testing earlier to find problems sooner.

Accelerating Time to Market: Enabling teams to work in parallel to increase productivity.

Reducing Cost: Cutting down infrastructure and operating expenses.

Capabilities

- **A wide variety of protocol and message format support** let you mix and match all formats as needed.
- **Accelerators for understanding the system under test** observe system traffic or extract information held within systems.
- **Performance profiles** use APM data to provide more realistic response times in virtual services.
- **Virtualizing systems** removes the need to reconfigure environments when adding or removing virtual services.
- **Sift and pass-through capabilities** handle specified scenarios with virtual services while allowing other scenarios to use the live system.
- **Multiple construction options** create virtual services via simple record and playback, data driven, ECMA Script, and/or complex data models.

About HCL Software

HCL Software, a division of HCL Technologies (HCL) develops, markets, sells, and supports over 30 product families in the areas of Customer Experience, Digital Solutions, DevSecOps, and Security and Automation. HCL Software is the cloud native solution factory for enterprise software and powers millions of apps at more than 20,000 organizations, including over half of the Fortune 1000 and Global 2000 companies. HCL Software's mission is to drive ultimate customer success with its IT investments through relentless product innovation. please visit www.hcltechsw.com
