Flexible Deployment Options and Faster Time to Market With HCL SoFY

Challenge
HCL found their customers used at least five different environments across multiple clouds, which caused deployment times to weeks and months, and was not suitable for the fast-paced world of cloud velocity. Customers were looking for an application solution that not only delivered value but also met strict competition cycles, and ultimately remedied their current issues.

Solution
HCL leveraged HCL SoFY to deploy their customers HCL Software products on the cloud of their choice—public, private or hybrid—in minutes. Today, many enterprises are portable across multiple cloud providers. HCL Software’s journey is driven by innovation and continuous improvement. For the adoption and innovation of new services, HCL SoFY allows tenants to manage infrastructure, cloud resources, and roll out applications, their traditional methodologies, as an enabler, to make high-speed changes frequently, predictably, and securely, with minimal friction.

Results
- Simplified cloud service delivery
- Reduced or no need for retraining
- 33% lower cost of ownership compared to traditional deployment methods
- 3x faster time to deployment

About the Company
HCL Software is the advisory business unit of HCL Technologies, providing services for the entire software lifecycle. Their clients can design, develop, and maintain software and IT services that can help businesses avoid the disruptive downturns of technology trends and deliver faster results.
