HCL OneTest Performance allows for quickly executing performance tests that analyze the impact of load on applications.

Testers can validate the scalability of web and server-based applications, identify the presence and cause of system performance bottlenecks, while tracking performance changes between versions.

HCL OneTest Performance enables performance testers to easily create realistic workloads that model daily user activities, while eliminating last-minute performance problems. Scalable through bare metal and Docker agents, provisioning a performance test platform has never been easier.

With HCL’s DevOps integration, bringing performance quality metrics to delivery pipelines is simple and effective.
Capabilities

- Captures and Tracks business SLAs in test plans
- Automatically Deploys the environment and schedules execution of workloads.
- Communicates results and areas of non-compliance to stakeholders
- Creates realistic user workloads that exercise key business transactions
- Integrates with HCL OneTest Data for on-demand synthetic test data generation

Benefits

- **Improves Quality**
  Yields higher quality products via fast, comprehensive testing that is optimized for development environments

- **Provides Capacity Management**
  Determines if hardware or production configurations need improvement before going live

- **Creates Quick Functional Flows**
  Determines if each transaction is executed as quickly as needed

- **Accommodates Business Needs**
  Checks systems for speed, scalability and stability
