Energy Giant Leads Industry Transformation with Innovative Digital Factory

**Challenge**

With the proliferation of smart technologies (smart meters, analytics-driven data, real-time mobile applications) to achieve a new level of efficiency and productivity in their energy production, one energy giant has found itself in need of a digital transformation that will enable innovation in this newly digitized and data-intensive energy industry.

The company has taken a bold step towards achieving this goal by choosing HCL Volt MX as its platform of choice to help drive innovation in this rapidly evolving landscape.

**Solution**

HCL Volt MX was picked to develop a single application — quickly and with reusable components — to run across multiple platforms and supports all digital initiatives.

**Results**

In the first year, 15 applications were created that solve customers and employee needs, as well as provide a process for running an integrated digital app development.

- **Performance:** The company is able to deliver apps in weeks instead of months, which means the company can respond more quickly to the demands of the market.
- **Savings:** By using the platform, the company has seen savings in both time and money — and the time-to-market and the launch of new applications worldwide is greatly improved.
- **Customer Experience:** The company has also seen an improvement in customer experience, with applications providing customers and employees with a window into the energy produced by the company.
- **Operational Efficiency:** The HCL Volt MX platform is enabling the company to deliver apps in weeks instead of months, which means the company can respond more quickly to the demands of the market.

“With the HCL Volt MX platform, we have been able to develop apps for our customers and employees that are responsive, intuitive and easy to use, and this has led to a significant improvement in customer satisfaction,” said the CIO for the company.

**About the Company**

The company chose HCL Volt MX because it offers a comprehensive digital app development platform that is mobile-first and has the ability to handle rapid changes in the market. The company was also impressed with the level of support and partnership that HCL Volt MX offers.

The HCL Volt MX platform is enabling the company to deliver apps in weeks instead of months, which means the company can respond more quickly to the demands of the market.
